

manage referrals. cut costs. reduce risk.

connecting referrals and orders.

Referalink™ connects your office to all payers (even those without electronic connections) and many area specialists, within an integrated online network requiring no additional equipment. Referrals and pre-certifications are all entered into a single interface and automatically authorized through our patented information system. Our support team constantly monitors your submissions and works with payers to ensure quick responses.

The system also automatically tracks your patients through their outpatient diagnostics and treatments. Consolidated patient logs link to area specialist offices to ensure seamless tracking until you receive the final report.

connecting against liability.

We all know the chilling scenario: the patient never followed up with the specialist. Eight months later, it is clear that a now inoperable tumor was the cause of the vague headache. You had no idea the patient never made an appointment.

“Technology has finally provided the tools to drastically improve the chaotic process of managing our out-patients. Referalink™ is a shining example of how systems created with clinical experience and technology can significantly benefit both providers and patients.”

“Referalink™ uses high-technology to create water-tight control of the referral process and simultaneously decrease costs while increasing revenue – this has never been done before in the healthcare arena.”

brad mcbrayer chief operating officer

Almost all malpractice carriers unequivocally state that lost follow-up constitutes one of the top, preventable, causes of malpractice claims. Referalink tracks patients from referral or order to receipt of consult report so no one “falls through the cracks”.

connecting outpatient management.

Let a free trial of Referalink prove to you that we can help eliminate costly confusion in your outpatient management. Currently, your practice pays many staff hours to comply with confusing payor rules. Pulling charts, interruptions, staff “hand-cuffed” on hold, just to name a few. These problems disappear when you outsource the entire tedious authorization process to Referalink.

eliminate confusion.

Staff time spent managing your patients’ referrals is lost revenue - you are not compensated for this costly task. Current systems allow you limited means to assure that a patient’s failure to follow your referral won’t result in a liability claim against you.

Referalink cuts your expenses significantly and gives you 100% monitoring of patient referral compliance. Even more, we do this with no up-front expenses and a completely free trial period.
